Info by Timo Reinwald

I was one of the first who built the artificial Orgonite . I build and sell now for 5 years no artificial Orgonite more . Since the energy cone has the artificial Orgonite replaced completely . The cone has the same effect as a large Chembuster , and work same time their reliability . Since the structure and mode of action is a new design , based entirely on the nature, ranging from purely natural substances up to the reproduction of natural neutralizing and harmonizing energies. On my homepage EnergieKegel.de under "History " , the development is performed by Cloudbuster to the cone . With tension that has nothing to do , unfortunately, know many of the manufacturers do not really like to work , you can build things. I have things built from scratch and also developed and continues to evolve , it never came to a standstill. Until the present generation of plaster finish . I like to try out , including in relation to your question , to explain something about the function and mode of action of the cone. For a better overview. The cone is made only from natural ingredients , it forms the neutralizing and harmonizing energies of nature . This means that it neutralizes and harmonized. Due to the natural body , it works just like the nature that always wants to achieve a harmonious balance . The cone and the heart neutralize energies when bad energies omitted , the organism can , for example, People thrive again , and has more energy available to be healthy and to stay healthy . On a side note , this is also the reason why no Überenergetisierung can take place , since only energies are neutralized or harmonized. Much like it happens in nature.

Because the gems / minerals (about 100 vers .) And the crystals (5-9) are cast with plaster in a natural composite , the energy is in a constant cycle , as well as on my website , under " How concerts energy cone his energy, " containing an image . Through this natural cycle , I was able to discover in nature / allowed and rebuild in the cone , the gems cleaned again by itself and load up again and again by itself on .

For this reason I do not use metal and no aluminum, they would interfere with the natural flow of energy. The gems and crystals coalesce into a practical part , a powerful piece of nature. One must see the whole as nature itself . The cone and the heart working at the level of information such as the natural way also . Matter is energy that knows nowadays everyone , so is energy but matter, it needs information that have even been accepted and recognized our scientists . And just when this information is at the cone , because exactly according to this principle, nature works . Otherwise it would not be possible , for example, chemtrails , unnatural clouds etc. dissolve .

the

The cone solves the information chemtrails underlie the information the first to make the chemtrail , with all its ingredients. Now, if this information is neutral or neutralized as a blank document , then the missing energy to condense into matter information . Thus, the chemtrail and the unnatural cloud dissolves , and thus also the ingredients are dissolved and can not fall to the ground . As it is the case with electrosmog , mobile radio radiation , etc. , that are easily neutralized and harmonized at the very natural way . (As I said , there is the cone only from purely natural substances , not an artificial element is included . If the cone o of the heart are at one, it 's just like taking a walk on a flower meadow , sitting in a forest clearing at a waterfall or stream running along .) exactly the same principle also works the nature, as otherwise they could recover from many a disaster that man has done to her. And by recreating this mode of action , which only by a purely natural structure was possible , work the taper . The radius of the cone is min. 5km, these refer above all to

the hole which is formed in the clouds , but this can also be much larger than the 5km . At the bottom of a cone has its effect also far above the house , by harmonizing energies in the environment. The closer you are the cone , or if you are staying in the same room or house , the effect is most effective.

You can set up the cone where you have the best feeling something special there is not going to be considered. Most of all , the cone is placed in the living room or bedroom. On the bedside table or in the living room on a low cupboard, or even like going to the window. But like I said , you can decide freely you there. Most of all because the cone is placed where life goes where you most often resides. The cone acts in all directions, including downward, the rock crystal in the center of the cone ensures that some of the energy goes up to heaven . But like I said , only a part, so he does not need to be in the basement . The hearts are meant for traveling , as a cone , not so easy to carry due to its size , can . If you , for example, away staying with friends or in a hotel. In the open field , for example, stored at radio masts, is the effective radius of 20 to 50m. If you have a heart in your pocket , pocket , etc. to protect it a go perfectly . The cone solves unnatural cloud cover and Chemtrails , which persist natural clouds , which is also very important , otherwise the consequences for the country and agriculture would not be good. The influence of the weather has been shown to follow the cone represents the natural typical weather for a region recovers . This means it can be used for sunshine and blue skies , but also for energetic and rain are important . Thus, for example, use it in Spain vers . drought -stricken farmers to bring rain on your back fields , and to avoid here in Germany by storm and hail damage. The cone unfolds from inside the house out , its full effect on the chemtrails and

You can make the cone and the heart weatherproof too , to my many clients have helped the world. In this case, the following has been found as the best way out . The cone or the heart with 2 or 3 layers of clear coat paint environmentally friendly . But I'll do this from an environmental perspective, not even as already mentioned as the cone starts to act from within. It would be enough to protect the cone and the heart just before rain , with a glass or plastic cover , is also made more often , or simply put under one roof. There are also customers who paint the cone and beautiful heart , and then make a final coat of clear polish on it . In Portugal, for example, is a cone for over a year in free , there will not freeze in winter but also . Slowly you can see the traces of the rain but on the cone . If you want to place the cone and the hearts permanently outside, then please use one of the above tips . But as I said , choose a nice place in the house or apartment , best go to your intuition , because where it feels good is also usually the best place. Even from inside the cone unfolds its full effect on the sky and the chemtrails . You can also bury the cone and hearts. You can perfectly into the ground , and remain stable in the ground. On the surface of the cone and hearts begin even crystals grow. In Australia (and also in Sweden) the cone of plaster is poured after my role model in some schools in the country in the classroom , so that children can easily take it home.
